

Ermi Now More Than Ever

The Environment has Changed! Telehealth delivery of physical therapy is now an effective and approved solution. Ermi is here to help.

As you implement your Telehealth initiatives, we understand that you are in need of resources to replace the stretching you normally provide to your patients. Nothing can fully replace your personal touch, but the Ermi programs provide a clinically proven alternative to in-person visits.

Your local Ermi Sales Professional is here to help, one simple phone call is all it takes to start the program to help your patients.

Now that the environment has changed, you need options so care so you successfully deliver Telehealth therapy to your patients.

Social Distancing creates a real challenge for you actively stretching your patients joints. Exercises and directed self-stretching have some limitations. Ermi's devices have been proven to deliver the same stretching forces provided by a physical therapist, in a fully anatomically controlled process.

Ermi's in-home programs have helped over 100,000 patients regain motion so that they can get back to work faster, back to life faster.

Program Overview:

- Ermi will work with Clinicians to identify the patients that could benefit from the program while limiting their exposure to COVID-19.
- Ermi will screen the patient environment and determine the safest delivery method. This can be either in-home or remote setup.
- Ermi will continue to monitor patient progress and provide routine updates to the clinicians on their progress.
- Ermi is an approved contractor for the Veterans Administration, is in-network with all major Worker's Compensation DME providers and offers robust self-pay options for uninsured and under-insured patients.
