

The Ermi Elbow **FLEXIONATER+**™

Improved Solution for Elbow Motion Loss

*Ermi's new Elbow **FLEXIONATER+** is the first in a series of revolutionary devices combining flexion and extension with the benefits of our patented hydraulic mechanism.*

Ermi is proud to release a new range of innovative products designated **FLEXIONATER+**.

The **FLEXIONATER+** products combines both flexion and extension into a single solution, enabling the patient to stretch the total range of motion for the affected joint. The patented hydraulic mechanism provides the high-intensity controlled stretch necessary to achieve successful results.

Benefits:

- Easy to follow program facilitates patient compliance
- Restores the ability to perform activities of daily living in only one hour per day
- Patient applied high intensity stretch achieving up to 54 foot-pounds of torque
- Safer alternative to secondary or revision surgery
